

Linking patients to Engage

How to link a patient record to their app

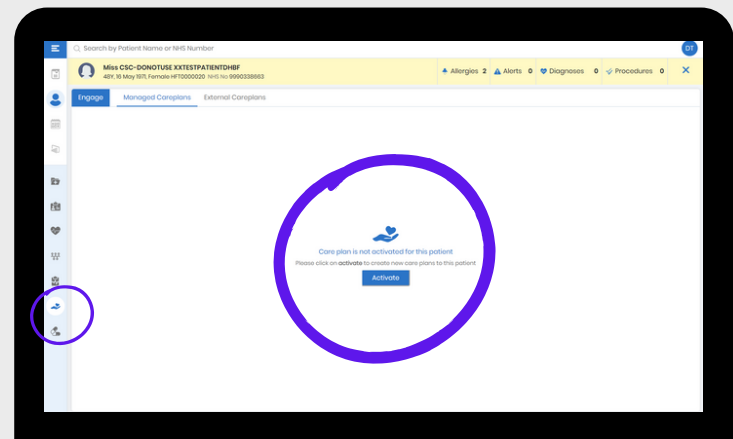

Step 1

When a patient registers for the Engage application, they enter their mobile number. If this matches a number in the portal they are automatically linked.

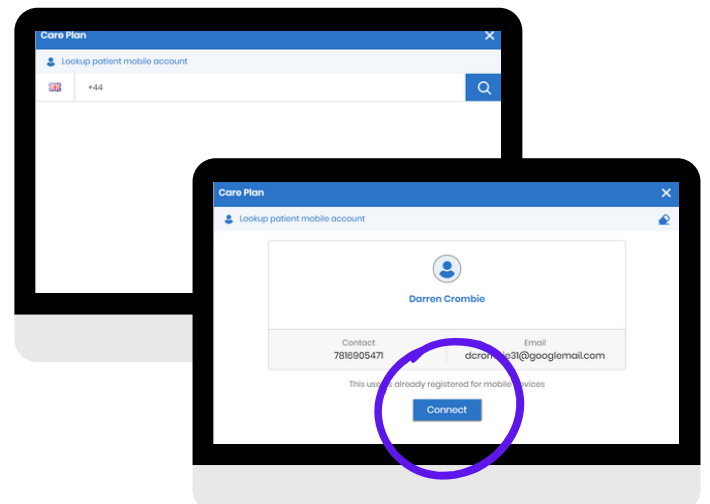

Step 2

If their mobile number was not found you need to manually link them. To do this just find their record in portal and select activate form the Engage tab.

Step 3

Now just search for their mobile phone number. Confirm it's the right patient returned then click connect. Done. Simple.
